Answers-1, BIO 3220, Introduction to Comparative Anatomy ...

Vertebrates are chordates that have a spinal cord enclosed by cartilage or bone. Vertebrates include mammals, reptiles, birds, fish, and amphibians. The vertebrate skeleton is made up of a brain case, bones, vertebrae, and gill arches (in fish and some amphibians).

Select all that apply. Which of the following are ...

A vertebrate (VUR-tuh-briht) is an animal with an internal segmented backbone. Vertebrates are the most obvious animals around us, and we are vertebrates too. But vertebrates make up less than five percent of all known animal species. All other animals are invertebrates. Invertebrates (ihn-VUR-tuh-brihts) are animals without backbones.
