Hello everyone, Update: Successful, see below. Also had to retype part of this message due to a bad cut. Edited for mobile to display better. I am trying to play with relayd on OpenBSD 6.6 to understand how this works. I have bought the book Relayd and Httpd Mastery and started trying to learn relayd a little bit. So far the book is great but I think I am getting a bit stuck on terminology.

relayd as a reverse proxy (help due to uncertainty) : openbsd

So, the name of the files must be the same as the address relayd is listening on. In our example relayd.conf, we are listening on "relayd_addr=127.0.0.1" so our files MUST be named 127.0.0.1.key, 127.0.0.1.csr and 127.0.0.1.crt. For serving the port 80, you just add the usual syntax as an HTTP proxy to the above configuration.
